

REFLEX

05 / 07 / 09 / 12 / 14

The Reflex kite established itself in the Takoon range as a high quality all round kite. The 2012 edition, designed by Herve Bouré, keeps its main characteristics of a hybrid 4 strut C shape with improvements to bar pressure, turning ability and re-launch ability of the bigger sizes. The kite offers a linear power and a progressive depower. The new Reflex is now available in 14m². The range comes with new one pump valve for added simplicity.

The moderate aspect ratio offers an ultra versatile kite, which allows you to ride on any playing field whatever your level is. The harmonized 4 strut design decreases weight and increases kite efficiency.

The optimized bridle on the leading edge offers excellent stability which gives confidence and helps progression, and allows the best surfing ever. Wind range remains faithful to the Takoon spirit - simply outstanding.

The Reflex offers a linear power and a progressive depower thanks to the location and depth of the profile. This profile is learnedly adjusted: easy to depower to keep control in the high end and more tolerant while powered up in the low end.

The diameter of the leading edge is reduced, mostly on the biggest sizes, to get more slide and upwind ability. Turning ability is increased to help position the kite quickly, making it perfect for side shore waves.

Bar pressure is perfect for an accurate kite flying, it's lighter on 9 and 12m² whilst maintaining ideal steering.

For freestyle, the Reflex provides excellent pop for wakestyle and huge lift for old school tricks. You'll like its intuitive flying. The «C» inspired shape allows easy unhooking without trimming.

Tip design provides easy re-launch in its wind range, pull on a rear line and up it goes.

Regarding construction, the Reflex benefits from the latest technology available. Single inflation with new valve shape and reinforcements at all critical wear & tear points.

05m² : 22<40Knots

07m² : 17<33Knots

09m² : 15<27Knots

12m² : 09<19Knots

14m² : 08<17Knots

Lines : cousin F800

Dacron: TEJIN T71830
Spi: TEJIN T96008

- Shape : hybrid
- Program : all style
- TK Moulded 3D struts end protectors
- Large thermo-moulded bumpers around the leading edge to improve seam protection when landing and launching the kite.
- Optimal trailing edge Dacron construction for flapping resistance.
- Vertical strut seams for accurate precision, due to the reduction in number of pieces used in the struts.
- Single Inflation
- 4 struts
- 4 lines system.

>Feeling :

Moderate bar pressure, you always know where the kite stands in the air

Linear power and progressive depower

Predictable kite with high stability

Fluid and c kite feeling

>Improvements :

Refined bar pressure

Faster turning ability

Lighter kite

New size 14m²

Colorways

C1

C2

C3

Kite comes without bar with:

- Kite bag
- User guide
- Repair kit
- Optional : 4m extension lines.
- Recommended for 12m² & 14m²
