

WOMENS

The TP100 series utilises our advanced tres-tex® waterproof and breathable fabric technologies to deliver performance at the highest level.

Radium: This season Radium performance has been raised to 15K 8K, offering you a higher performance than ever before and ideal for any snow conditions. Radium fabric incorporates our advanced membrane technology. This allows the body's water vapour to pass freely, reducing condensation on the inside while preventing water molecules from penetrating from the outside. Radium branding has been updated and a new metal badge incorporated. The inner garment has been improved and updated once more, and a new printed lining has been introduced to add to the technical appeal of this range.

Stretch: The introduction of stretch polymers to this fabric provides great extension and recovery properties, offering the wearer improved freedom of movement, extra fit and comfort. A Durable Water Repellent finish repels water from the face of the fabric and our tres-tex® coating keeps the rain out while allowing perspiration vapour to escape. Ideal for active and highly mobile pursuits.

Essential: With a high specification technical fabric, Essential delivers all the performance you would expect from tres-tex®. This coated fabric stops water penetration yet still allows moisture vapour to move away from the body. These technical properties coupled with classic and functional design makes Essential a snowsports enthusiast must have range.
